

["Future Time Traveller"](http://future-time-traveller.eu/) is an innovative career game developed as part of the European project [FUTURE](#), which introduces Generation Z to the jobs of the future and the skills they would require through game-based missions in a 3D virtual world.

The game is an European innovation "translating" significant amount of analyses and forecasts about the future world into a language accessible to young people and offers a new digital career guidance approach that combines high technology and original game scenarios.

The three-dimensional world transfers players into a futuristic environment and creates a unique immersing experience, combining emotional and social learning. Players use their avatar to move, interact and overcome various challenges.

The virtual journey includes 7 adventure missions, which apply elements from the escape rooms and help young people develop the skills and knowledge about the jobs of the future. Using a time machine, the players teleport to 2050, where they must understand how different social and technological transformations shape the future world of work.

The game is freely available in 7 languages and offers different ways of application. On the [FUTURE project website](#) you will find detailed instructions and information, as well as various useful resources for career guidance practitioners – reports, presentations, methodology for career game-based scenarios, good practices and ideas of young people for future jobs.

The initiative, coordinated by the Business Foundation for Education in Bulgaria, received an [international award](#) for social innovative platform.
